[¼" -20 x 4½" Cushion rail Bolt for all Models – Part # 20200020](#)

Our rails currently use K66 rubber, the wooden backing is designed to preserve your table's 2:1 ratio. If you use any different profile of rubber other than that originally on your cushions (K66, K55, U23) the 2:1 ratio will become slightly compromised.

We receive many inquiries for the "old 3 bolt rails," because customers' tables were built prior to the switch to 5-bolt Valley rails. We simply added 2 additional attachment points for the swap to 5 bolts. The "three bolt holes that matter" are unchanged, and no modification is needed for cushions to fit tables built IN THE LAST 20 YEARS.

For Valley tables built 1969-1999, a minor modification, detailed in your instructions, will allow the rails to fit.

Current cushion rails will not fit Valley table prior to 1969. Current Dynamo cushion rails should fit most tables.

In the event of a defective set of cushion rails, we may need to receive your cushion rails back for rework or replacement and may not be able to send a replacement set in advance. Please **CONTACT TECH SUPPORT IMMEDIATELY** in the event of a problem so we can quickly determine the best course of action.
