

VALLEY Talks about Pocket Liners

“My table must be a Panther, it has these logos in the corners!!”
NO! Your table might be a Cougar. That exact cat logo was used by Valley for 30 years before the first Panther table was built. All Panthers are cats, but not all cats are Panthers.

Thinner, more pliable lip

May have this hole punched.
The only difference between Punched and unpunched.

The PANTHER pocket liner—The lip says PANTHER
Used on current model Panther and Top Cat tables 2009-present, characterized by their flush fit in countersunk corner castings. These pocket liners ARE NOT going to fit older tables.

The CLASSIC pocket liner—The lip says VALLEY
Used of Valley tables roughly 1970--2009, and on Valley non-coin tables since 2009. The lip of these pocket liners overlaps the corner casting. These pocket liners ARE NOT going to fit on Panther tables.

Castings before 1992 were not tapped for allen screws and use UN-PUNCHED liners. Castings 1992-present were tapped and use PUNCHED liners

We get this a lot: “There are so many options, I don’t want to order the wrong one” - It’s easier than you think
CORNERS vs CENTERS: Each table has 4 corner and 2 center pockets. That’s why we have corners and centers listed.
UNPUNCHED liners : older tables where the pockets were attached with little nails (we no longer stock the nails, last used nearly 30 years ago)
PUNCHED liners : newer non-Panther Valley tables (or older tables with new castings) where the pockets were attached with allen screws or plastic plugs.
PANTHER liners : tables 2009-present only where the existing liners say “Panther” on the lip.
