

HOCKEY TOP RAILS – OLD vs. NEW (picture worth 1000 words)

Starting in 2011, Dynamo introduced rounded corner top rails (shown at left), for a more attractive look that eliminated the need for a corner protector.

For more than 10 years, as of 2013, the older style rails were discontinued and have been depleted from inventory.

HERE'S THE ISSUE: As seen in the photo shown at the right, you cannot mix new style rounded and old style rails on the same corner of a table. The corner protector will not fit the new rail, and from the shape of the old rail the importance of corner protectors is OBVIOUS.

This means if you need to replace one goal end rail, you'll also need to replace that table's side rail and opposite goal end rail so the rail corners mate up.

Please don't order the new style rail thinking you can make it work. Several have tried. None have succeeded.

Knowing the next question: repeated experiments have failed to find a good "touch up paint" for Hot Flash, Fire Storm, Black Hole and Cosmic Thunder rails. First, these rails are powdercoated, not painted. You can't touch up chipped powdercoat with paint. Next, any paints which were the right color didn't react to blacklight, those that showed up in blacklight were a totally wrong color. The best touch up paint is completely replacing the rail, it is tough even for our vendor to do it right the first time.

Discounted package pricing is offered on the Webstore for customers wishing to replace a complete [Hot Flash](#) or [Fire Storm](#) top rail set.

CORNER PROTECTORS – OLD vs. NEW (picture worth 1000 words)

Nearly 20 years ago, Dynamo introduced a corner protector that covered the seam between the side and goal end rails. Because it fit ALL Dynamo tables, it made sense to discontinue the older style corners and stock only the one.

The top rail extrusion is identical for all Dynamo coin and ProStyle tables that use corner protectors. The corner covers **WILL** fit. Trust us.

Air Hockey Table Corner

Remove the cover on the double face adhesive and slide on the replacement corner until it snaps over the inside lip.

Complete installation using two screws.
