

About Bearings

These are the only foosball bearings available from Valley Dynamo.

Figure 1 is a [1" snap-in bearing, part # 20515040](#). It is used on the Tornado Sport and Dynamo Blaster, and MAY fit older entry-level tables with a 1" sidewall that use a snap-in bearing.

Figure 2 is a [1½" snap-in bearing, part # 20515992](#). It is used on the Tornado Classic and Dynamo Big D, and MAY fit older mid-level tables with a 1½" sidewall that use a snap-in bearing.

Figure 3 is the split bearing and bearing nut combination used on Coin Foosball and T-3000 and similar split cabinet tables, and the Tornado Elite and Worthington and top-end home model tables. We have been asked if a table using press-in bearings can be modified to accept this bearing. **DON'T TRY IT. The sidewall is usually the incorrect thickness, the holes are not large enough, and enlarging the holes while maintaining precise alignment will be EXTREMELY difficult. If done incorrectly, it will be impossible to repair your table.**

Tornado makes no guarantees these bearings will fit a particular **old model of table. Because these three are all that's available if it looks and matches the measurement of what you have, it's probably OK.**

Measure carefully before ordering. *Thanks*
