

Dynamo 3-piece Shield Set Installation Instructions

Dynamo's 3-piece Shield set will help to keep the puck on the table and discourage the placement of drinks on the table's side rails. While it will create a safer environment, no shield has been invented that will keep every puck on every playfield every time. Exercise caution during play, keep hands and fingers clear of the playfield, and always follow the instructions from Dynamo Caution Label, part # 850404030

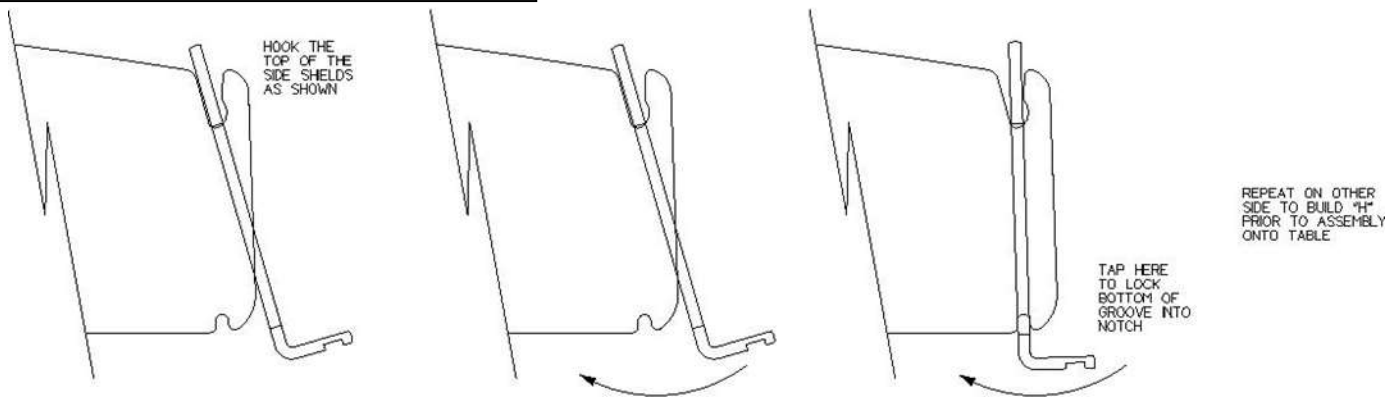

Kit Contents:

- Side Shields 2
- Center Shield 1

Tool required

- Phillips screwdriver

1. Snap the side shields into the center shield as shown below to form a single H-shaped unit
2. Remove the bolts from the Side Top Rail, except for the bolt at the very end of each Rail.

3. On any table with LED rail lighting, align the Side Shield over the LED light strip, so the lighting is inside the groove of Side Shield.
4. Mount with the flange of the Shields to the outside. The side shield with the notch at the bottom should be mounted on the side opposite the service door
5. Re-install the Top Rail bolts previously removed
6. Dynamo shields require periodic cleaning and will need to be removed in order to clean under the side shields - where grime and dirt can accumulate and become trapped. We recommend a full cleaning once yearly, best done when using a 1/64" drill bit for annual cleaning of the playfield's air pores. Use a standard glass/window cleaner, harsh chemicals may degrade the rubber grommets.
